Responsibilities included developing RESTful APIs with ASP.NET Web API, managing data with MySQL, and deploying services on AWS Cloud to ensure scalability and reliability.

- *PIONEER SYSTEM*   *Sr. Software Developer - Jun 2017 to March 2020*

  Community Management
  - With ASP.NET C#, SQL Server

  Here I am working on a product. Developed a product to manage community websites, focusing on event management, user interactions, and data administration. Key contributions included creating modules for event scheduling, user profile management, and generating reports to support community activities using ASP.NET and SQL Server.

  Housing Society
  - With ASP.NET, SQL Server, Crystal Reports

  Streamlined housing society operations by developing a web-based management system. The application included modules for user management, maintenance tracking, account management, and reporting. Used ASP.NET for web development, SQL Server for database management, and

Crystal Reports for generating detailed financial and operational reports.

Account Management
- With SQL Server, C#, Asp.Net, Crystal Reports

This Existing windows application Project in VB6 and the client wants to have a website so he can access it from anywhere from the browser.
The client has existing applications with modules like account, inventory, sales, Reports, etc.

Salon Web Application
- With SQL Server, C#, Asp.Net, Crystal Reports

Developed a web application to manage salon operations, including appointment scheduling, user management, inventory control, and financial reporting. Designed the database schema, coded the application in C# and ASP.NET, and created reports using Crystal Reports to provide insights into the salon's performance and customer trends.

Education Loan Management System
- With SQL Server, C#, Asp.Net, Crystal Reports

Developed and maintained an Education Loan Management System to streamline the process of managing student loan details. The system facilitated the registration of students' information for loan applications, managed donation details for funding student loans, and handled the entire loan approval workflow. Additionally, the system tracked and managed EMIs (Equated Monthly Installments) from students post loan approval. Key contributions included designing and implementing the database schema in SQL Server, developing the application logic and user interface using C# and ASP.NET, and generating detailed financial and operational reports using Crystal Reports. This project significantly improved the efficiency of loan processing and enhanced the accuracy of financial tracking and reporting.

- *BS Soft*   *Software Developer - May 2014 to June 2017*

Inventory / Production Management System
- With .NET4.5, C#, ASP.NET MVC, LINQ, SQL Server, SAP Crystal Report, Bootstrap, jQuery, JavaScript

Our Enhanced Inventory and Production Management System is a robust solution built on cutting-edge technologies including .NET4.5, C#, ASP.NET MVC, LINQ, SQL Server, SAP Crystal Report, Bootstrap, jQuery, and JavaScript. Designed to streamline inventory control and production processes, this system offers comprehensive functionalities to optimize efficiency and enhance productivity.

1. **Inventory Management:**
   - Efficiently track and manage all types of inventory items, including raw materials and finished goods.
   - Receive notifications for low stock levels, enabling timely replenishment to prevent stockouts and production delays.
   - Real-time visibility into inventory levels across multiple locations, facilitating better decision-making and inventory planning.
2. **Production Module:**
   - Seamlessly manage the entire production process from work order creation to dispatch.
   - Track the progress of work orders, including start and completion times, to ensure timely delivery of products.

- Generate labor job reports to monitor workforce productivity and optimize resource allocation.

Marketing Management System
- With .NET4.5, C#, ASP.NET MVC, LINQ, SQL Server, Bootstrap, jQuery, JavaScript, SAP Crystal Report.

Our Streamlined Marketing Management System is a comprehensive solution designed to empower businesses in efficiently managing their marketing operations. Built using advanced technologies such as .NET4.5, C#, ASP.NET MVC, LINQ, SQL Server, Bootstrap, jQuery, JavaScript, and SAP Crystal Report, this system offers a robust platform to streamline marketing processes and enhance productivity.
